Syn.—Occupied, employed, engaged, active, attentive; laborious, hard-working, painstaking, persevering, indefatigable, tireless, untiring, unwearied, unremitting.—BUSY, INDUSTRIOUS, DILIGENT, ASSIDUOUS, SEDULOUS agree in the idea of application. One is BUSY who is actively *engaged*, either habitually or for the time being; as, *busy* as a bee, he is too *busy* just now to see you. INDUSTRIOUS applies to one who is characterized by attention to business, and implies habitual devotion to labor; as, an *industrious* workman. DILIGENT (of narrower range than *industrious*) implies earnest application to some specific object or pursuit; one may be *diligent* in seeking some favorite end without being in general *industrious*; as, a *diligent* student of the classics, *diligent* in his service of the state; "Be *diligent* that ye may be found of him in peace" (2 *Pet.* iii. 14). ASSIDUOUS implies studied and unremitting, SEDULOUS, painstaking and persevering, application to a business or enterprise; as, *assiduous* in his attendance; "attentive to watch opportunities of obliging, and *assiduous* to make use of them" (*Mad. D'Arblay*); cf. "the unceasing *assiduity* with which I have pursued those studies" (*Sir J. but (bŭt), *prep. & conj.* [ME. *bute*, *buten*, *butan*, outside, without, except, unless, but, AS. *būtan* without, on the outside, except, besides, *be-* + *ūtan* outward, without, fr. *ūt* out. Primarily, *būtan*, as well as *ūt*, is an adverb. See BY, OUT; cf. ABOUT.] The prepositional uses of *but* have blended so closely with its conjunctional uses, that in some cases (as when connecting two objectives, or introducing an object clause) it may be construed either as preposition or as conjunction; as in, Whom have I in Heaven *but* thee? I 'd not believe, *but* that she spoke it dying. Both uses are therefore here treated under one entry, with senses as follows: **1.** Outside of; without; except; save;—used before a word, phrase, or clause: **a** In a distinctly prepositional construction with the sense or force of: (1) Without. *Obs. or Scot.* "Gang *but* the house." *Orf. E. D.*

Touch not the cat *but* a glove. *Motto of the Mackintoshes.*

To live *but* her I canna. *Burns.*

(2) Except; — used before a pronoun in the objective (older dative) case; as in, All have coats *but* me. Now, except in colloquial use, *but* is here treated as a conjunction; as in, "All *but* he had fled." **b** In constructions chiefly negative, and not necessarily prepositional, with the sense of: Excluding. "None *but* the brave." *Dryden.* "I can bear anything *but* contempt." *Miss Edgeworth.* "There was nothing to be seen *but* fires." *Lamb.* The total or idea excluded may be expressed indirectly or only intimated, as: (1) In various negative and interrogative expressions in which the word or words after *but* generally take the emphasis; as in, "It never rains *but* it pours;" "It cannot be *but* Nature hath some direction." *Hooker.* Specif.: In rhetorical questions having the force of a sweeping negative. "Who can it be, ye gods, *but* perjured Lycon?" *E. Smith.* Also in constructions in which *but* is elliptically equivalent to *any*, or *anything*, *but*; *other*, or *otherwise*, *than*; — sometimes, after *cannot*, *dare not*, etc., with further ellipsis of a verb; as, he cannot *but* hear. Cf. def. 2 (below). (2) Before a subordinate or object clause, with various negative constructions (where *that* is now generally used), as with the conditional mood (1st cit. below); or in an expression of degree with *not so*, or formerly with *no sooner*, *scarcely*, *not long*, etc. Cf. defs. 3 & 4 (below).

And, *but* my noble Moor is true of mind . . . it were enough to put him to ill thinking. *Shak.*

Not so vagrant a person *but* that he had married. *E. Gosse* (*Oxf. E. D.*).

(3) After *no*, *not*, *never*, etc.; or in a question implying a negation, where the negation is doubled by a word of negative implication, as *doubt*, *question*, *fear*, or formerly *deny*, *hinder*, *fail*;—often where *that* alone is now felt to be more logical or natural.

There is no question *but* the king of Spain will reform most of the abuses *Addison.*

I do not doubt *but* that you are surprised *Ruskin.*

What hinders then *but* that thou find her out? *Addison.*

2. a Only; no more than;—in expressions where, by ellipsis of a negative, *but* takes on the force of a negative adverb; as, he is *but* young; I can *but* hear. Cf. def. 1 **b** (2). **b** No more or less than; just; as in, "*but* now," and in such constructions (now chiefly dialectic or archaic) as, "they are *but* lost;" "how they do *but* totter!"

If they kill us, we shall *but* die 2 *Kings* vii 4.

But now I was the lord
Of this fair mansion *Shak.*

3. If not (formerly often with *if* expressed with the *but*); — used in archaic expressions to introduce a condition (as, no man may come, *but* he have warrant) or in emphatically introduced assertions.

A man may not be an orator, heaped with praise, *but* if he have gotten the knowledge of all things. *Sir T Elyot.*

It shall go hard *but* I will better the instruction. *Shak.*

Beshrew me *but* I love her *Shak.*

Ten to one *but* the police have got them. *Miss Yonge.*

4. Than;—after a comparative. *Obs.*, except where *no more* is felt as equivalent to *nothing*; as, "There remains no more *but* to thank you." *Orf. E. D.* "No more *but* so." *Shak.*

5. That not;—in expressions where, by ellipsis of a pronoun, *but* has the force of a negative relative.

There is no man ot worth, *but* has a piece of singularity. *Bp. Earle.*

6. On the contrary; yet; however;—introducing a coordinate but adversative word, phrase, or clause; as, "Not Angles *but* angels!" The clause so introduced is often contracted; as, he never boasted of his courage, *but* [he boasted] of his skill. Sometimes *but* is weakened into a mere particle or vocable marking a transition of thought, as in a syllogism, or giving an adversative turn after an exclamation; thus, "All men are mortal; *but* Socrates is a man;" "Heavens! *but* it rains!"

Now abideth faith, hope, charity, these three; *but* the greatest of these is charity 1 *Cor.* xiii. 13.

When pride cometh, then cometh shame; *but* with the lowly is wisdom *Prov* xi. 2.

Syn.—BUT, HOWEVER, STILL, NEVERTHELESS, YET, as here compared, have an adversative sense with reference to what precedes. BUT marks the opposition without emphasizing it; as, This is not winter, *but* it is almost as cold. HOWEVER is weaker, and throws the opposition into the background; as, This is not winter; it is, *however*, almost as cold. *However* also introduces a final decision or conclusion; as, The truth, *however*, has not yet fully come

out—i. e., such is the speaker's conclusion in view of the whole case. STILL, like *nevertheless* and *yet*, states more strongly an adversative conclusion, implying a concession in what precedes; as, It is true that winter is over; *still* it is almost as cold. NEVERTHELESS implies that even if the concession be fully made, it has no real bearing on the question; as, To be sure it is no longer winter; *nevertheless* it is quite as cold; Say what you will, we must *nevertheless* go forward. YET implies that, however extreme the concession may be, the consequence naturally to be expected does not follow; as, It is well on in May, *yet* it is almost as cold as midwinter; "Though he slay me, *yet* will I trust in him" (*Job* XIII. 15). C

C (sē); *pl.* **C's, Cs** (sēz). **1.** The third letter of the English and of most cognate alphabets. It was originally equivalent to Greek *Gamma* and Semitic *Gimel*, from which, through various adaptations, its form has been derived (see ALPHABET, *Illust.*). Originally in Latin, as in Greek and Phœnician, it represented the sound of *g* in *go*, *k* being used with the same value as in modern English. But *k* was little used by the Romans, and C served in earlier Latin for both the *g* and the *k* sound. The *k* sound being the more common, C was later used to represent this sound only, a new sign (G) replacing it in the 3d century B. C. for the *g* sound. C had originally only the sound of *k* in Anglo-Saxon or Old English, but in the latter part of the AS. period it gradually became palatalized into the sound of *ch* (church) before *e* and *i*, and was with this value replaced from the 12th century on by the symbol *ch* from the French. But, on the other hand, C came into English in many French words with the value *ts* before *e*, *i*, and *y*, which became simple *s* by the end of the 13th century. C, therefore, has the value *k* in modern English before *a*, *o*, *u*, or a consonant other than *h*, and the value *s* before *e*, *i*, or *y*.
2. As a *symbol*, used to denote or indicate: **a** The third in a series; third in order or class; sometimes, the numeral 3; as, Company *C*; A, B, and *C*. **b** *Math.* (1) [*cap.*] A constant quantity, as distinguished from a variable. (2) *Alg., etc.* A known quantity (which see). **c** [*cap.*] *Chem.* Carbon. **d** [*cap.*] *Astron.* A prominent Fraunhofer line characteristic of hydrogen. **e** *Elec.* Current density. **f** [*cap.*] Modulus of rigidity. **g** *Music.* (1) The keynote of the normal or "natural" major scale, which has neither flats nor sharps in its signature; also, the third note of its relative minor scale (that of **A** minor). (2) In notation, any symbol representing this tone, as a note on a certain line or space of a staff. See CLEF, *Illust.* (3) On a keyboard, any key giving this tone. See KEYBOARD, *Illust.* (4) C after the clef is the mark of common time, in which each measure is a semibreve (four 𝅝 fourths or crotchets); for *alla breve* time it is written 𝅜.
3. As a *numeral*, C stands for 100. The original form was ⊙, for the Gr. *θ*, which was first reduced to C and then regarded as the initial of the Lat. *centum.* CC stands for 200, CCC for 300, and so on. C̄ stands for 100,000

cab'a-la, cab'ba-la (kăb'ä-lä), *n.* Also *kabbala, kabbalah.* [LL. See CABAL, *n.*] **1.** A kind or system of occult theosophy or mystical interpretation of the Scriptures among Jewish rabbis and certain medieval Christians, at first handed down orally through chosen individuals, but later committed to writing. It treats of the nature of God and the universe, and teaches that God is the original principle of all being; that creation is the process of emanation; that the powers of evil can be brought to an end by the triumph of morality and goodness among men, through the supremacy of man's spirit over his desires, the belief being that when man's mind is in full control Messiah will come and restore the world to a perfect state; that man is a microcosm; and that writing was revealed as a means of penetrating into the divine mysteries. The cabalists therefore assume that every letter, word, number, and accent of Scripture contains a hidden sense; claim to know the methods of interpretation for ascertaining these occult meanings; and vie with each other in giving them, even pretending to foretell events by this means.

In the *United States* the cabinet is a creation of statute law and not of the Constitution. It is composed of the heads of the executive departments, namely, the Secretaries of State, the Treasury, War, the Navy, the Interior, Agriculture, and Commerce and Labor, the Postmaster-general, and the Attorney-general. They are appointed by the President and removable at his will. Similar cabinets exist in those republics whose forms of government are modeled upon those of the United States. In *England* the cabinet, which has no legal status, but is a creation of custom, developed out of the Privy Council and first became important in the reign of Charles II. (1660–85). It consists of those privy councilors who actually carry on the government's administration and who also take the leadership of all legislation, being responsible for it by custom to Parliament. They are appointed nominally by the sovereign, but actually by the leading man of the dominant party, who becomes prime minister. With the crown the cabinet constitutes the executive, but real authority is with the cabinet alone. The cabinet does not consist invariably of the same number, but eleven officials always have seats in it, namely, the First Lord of the Treasury, which position the Prime Minister usually holds, the Lord Chancellor, the Lord President of the Council, the Lord Privy Seal, the Chancellor of the Exchequer, the five Secretaries of State, and the First Lord of the Admiralty. To these are generally added from three to six others according to circumstances, as, often, the President of the Board of Trade, usually, lately, the Chief Secretary for Ireland, and frequently the President of the Local Government Board. The English self-governing colonies have similar cabinets. In *France* the cabinet is not an executive body, but a purely political body, shaping legislation in the Chambers and being responsible by law to them. The same men are also heads of the different administrative departments, but they act in an entirely different capacity and have a different name (the Council). Like the English cabinet, the French cabinet is not a body recognized by law.

a sequence of chords, ending a phrase or period with an effect of partial or total harmonic completion. A cadence is *major* or *minor* according as it ends on a major or minor chord, and *extended* when the two chords determining it are led up to by a formula of preliminary chords. A **perfect cadence,** authentic or plagal, has both chords in fundamental position, with the soprano ending on the tonic. Syn. — Estimate, determine; tell, number, enumerate, cast up. — CALCULATE, COMPUTE, RECKON, COUNT agree in the idea of numerical or arithmetical estimation or determination. CALCULATE (cf. *calculation,* under PRUDENCE), implies a process, frequently elaborate, directed to ascertaining or determining a particular result, which is looked on as problematical; as, to *calculate* the velocity of light, to *calculate* an eclipse, a nativity; "To *calculate* . . . the chances of a northwest passage to the Indies" (*J. R. Green*). COMPUTE suggests rather an estimate (whose processes may or may not be elaborate) of something which is commonly regarded as given; as, to *compute* interest, the area of a field. RECKON frequently implies simpler or less technical processes than *calculate* or *compute* (as, to *reckon* by counters, to *reckon* on one's fingers); in present usage it is distinguished from COUNT (see etym.), which denotes mere enumeration or telling of objects one by one; as, to *count* the eggs in a basket, the people in a room. The use of *calculate* in the sense of "consider, suppose" (as, I *calculate* you are right), for *reckon* (itself now colloquial in this sense), is a violation of good usage.

See CALENDS.] **1.** A system of reckoning time, esp. of fixing the beginning, length, and divisions of the civil year; an orderly arrangement of the divisions of time, as years, months, weeks, and days, adapted to the purposes of civil life; as, the Chinese, Jewish, or Roman *calendar.* The **Julian calendar** is that introduced by Julius Cæsar in B. C. 46, and slightly modified under Augustus, in which the year was made to consist of 365 days, each fourth or bissextile year (leap year) having 366 days, and the months having the same names, order, and length as now. The **Gregorian calendar** (the one now in general use) is that introduced by Pope Gregory XIII. in A. D. 1582 and adopted in Great Britain and the English colonies in America in 1752, consisting in a reformation of the Julian calendar. Since the Julian year is about eleven minutes longer than the astronomical year, the date of the vernal equinox had, since 325 A. D., become displaced by ten days. In order to restore it, Gregory suppressed ten days by ordaining that Oct. 5, 1582, should be called Oct. 15, and to prevent future displacement he provided that of the centesimal years (1600, 1700, etc.) only those exactly divisible by 400 should be leap years. In other respects the calendar is the same as the Julian. The difference between the two calendars is thus 10 days from 1582 to 1700, 11 days from 1700 to 1800, 12 days from 1800 to 1900, and 13 days since 1900. The two modes of reckoning are also called *Old Style* (abbr. *O. S.*) and *New Style* (abbr. *N. S.*); as, March 5, Old Style, is the same as March 18, New Style (since 1900).

2. A tabular statement or register of the divisions of a given year, referring the days of each month to the days of the week, often also giving important astronomical data, as the dates of the four chief phases of the moon, and some-

Calvinism especially emphasizes the sovereignty of God in the bestowal of grace. It has been subject to many variations and modifications in different churches and at various times. It is set forth in all the Confessions of the Reformed churches, as the Gallican (1559), Belgic (1561), Second Helvetic (1566), Dort (1619), Westminster (1647), and its teaching as to predestination is in the Thirty-nine Articles of the Church of England. This is frequently called the **Palestinian canon** as distinguished from the larger collection of books, including what Protestants designate as the Old Testament Apocrypha, grouped together in the sacred literature of the Hellenistic Jews, in the Greek Version called the Septuagint, which is often called the **Alexandrian canon**. This latter collection contained all the books included in the Roman Catholic canon (which is based upon it, and hence embraces the Apocrypha nearly as now printed in English). The present canon of the New Testament was recognized in the 3d Council of Carthage (A. D. 397), and was left unchanged by the Reformation controversies; the **Roman Catholic canon** of the Old and New Testaments was finally fixed by the Council of Trent (1546). can'on (kăn'ŭn), *n.* [OF. *canone*, *canonne*, F. *chanoine*, L. *canonicus*, fr. *canon* rule, canon.] *Eccl.* Orig., an ecclesiastic residing with others in a clergy house, or in later times in a chapter house of a cathedral or collegiate church, and following the canonical life; in modern times, one of a number of dignitaries who form a sort of council to a bishop and perform certain duties in a cathedral church, or one of a similar body connected with a collegiate church. The term *canon* was first applied to all the clergy of a large church, from their being entered on a canon, or list, and later to the clergy of a large church or of a cathedral who lived together under a canon or rule of life. Their support came from the property of the church which they served, esp. by choir duties. This communal life was abandoned in the 10th century and the income from the property so divided that each of the canons got a prebend. These canons constituted the body called the chapter, which met for certain purposes. The canons thus became secular, that is, they did not live in a monastery or under a monastic rule. Those who received no prebend were called **minor canons**; those who did, **major**, or **full, canons**. In the Church of England there are, besides the resident canons, nonresident canons and honorary canons in the recently constituted cathedrals who have no vote in the chapter and no emolument. There are also minor canons who have certain duties, but no vote, and who receive pay. Members of certain Roman Catholic orders are called **canons regular**; e. g., the Augustinians, who date from 1256, and claim to follow the rule drawn up by Saint Augustine of Hippo in the 5th century. Because of the color of their habit, they were known in England as the **Black Canons**. A branch of them were the Premonstratensians, called the **White Canons**, because they were clad in white.

Syn.—CANT, JARGON, ARGOT, LINGO, SLANG, VULGARISM, COLLOQUIALISM. *Cant, jargon, argot,* and *lingo* apply primarily to the phraseology of a class; *slang, vulgarism,* and *colloquialism* do not. CANT usually connotes depreciation or contempt (as, the *cant* of the schools), and is most frequently applied to stock or conventional, often insincere, religious phraseology; as "If there be not something very like *cant* in Mr. Carlyle's later writings, then *cant* is not the repetition of a creed after it has become a phrase" (*Lowell*). JARGON adds the implication of unintelligibility except to the initiated; as, "Whitman . . . has a somewhat vulgar inclination for technical talk and the *jargon* of philosophy" (*Stevenson*); "cockets, and dockets, and drawbacks, and other *jargon* words of the customhouse" (*Swift*). ARGOT denotes specifically the secret *jargon* of thieves. LINGO is contemptuous for any foreign language or peculiar dialect (esp. one not understood), and also for technical cant regarded as a dialect; as, "I should be half inclined to name the Yankee a *lingo* rather than a dialect" (*Lowell*); "I have often warned you not to talk the court gibberish to me. I tell you, I don't understand the *lingo*" (*Fielding*). SLANG, while often synonymous with *cant* or *jargon* (as, the *slang* of the race track, college *slang*), usually refers to the popular but unauthorized (and usually ephemeral) vogue of odd, grotesque, or strained words or turns of speech; as, "The *slang* of cities in no wise he knew; 'tipping the wink' to him was heathen Greek" (*Keats*). VULGARISM is a term of wider scope than *slang* (which it may include) and applies to any vulgar word or phrase substituted for one in good use; as, to "suicide," to "burglarize." COLLOQUIALISMS are expressions permissible in familiar, but not in formal or set, discourse; the term carries no derogatory implication. See CHAT

ca'pa-ble (kā'pa-b'l), *a.* [F. *capable*, LL. *capabilis* capacious, capable, fr. L. *capere* to take, contain. See HEAVE.]
1. Able to receive; having ability (whether physical or mental) for the reception *of*, for giving reception *to*, or for providing reception *for;* furnished with capacity; hence, having ability for the reception and retention, or for the taking in and holding *of* (anything); provided with physical capacity or mental comprehension. Formerly, *capable* was used (with *of*, *to*, or *for*) directly with the thing held or the thing measuring capacity; as, a theater *capable* of two thousand people; an ear *capable* of distant sounds; its general sense was thus "receptive ability" or "containing ability" (cf. etymology, above). Now, however, the verbal idea of "receiving" or "containing" is nearly lost, the stress being upon the notion of "ability" or "adaptation" (cf. CAPACIOUS); consequently, *capable* is now used almost entirely with present participles; as, a theater *capable* of seating two thousand; an ear *capable* of hearing distant sounds; or, with nouns conveying a verbal idea; as, a mind *capable* of discipline; an animal *capable* of thought, a body *capable* of nourishment.

3. Qualified, disposed, or fitted for receiving; — with *of*. *Archaic.*
Syn. — Full, extensive, wide, broad, roomy, large, considerable; plentiful, plenteous, copious, abundant. — CAPACIOUS, SPACIOUS, AMPLE, GOODLY agree in the idea of largeness. CAPACIOUS stresses ability to hold much; as, *capacious* pockets, a *capacious* cupboard. It has frequently a more or less humorous connotation, as, "Gradually had the *capacious* chin encroached upon the borders of the white cravat" (*Dickens*). SPACIOUS implies roominess, wide extent, breadth of sweep, or (fig.) the absence of trammels or limitations; as, "the whole interior . . . a dim, *spacious*, fragrant place, afloat with golden lights" (*W. Pater*); "Fielding lived when days were longer . . . when summer afternoons were *spacious*" (*G. Eliot*). AMPLE implies sufficiency to meet all demands; it frequently connotes fullness or completeness; as, "the fortune . . . *ample* enough to have supported the expense" (*Clarendon*); "More pellucid streams, an *ampler* ether, a diviner air" (*Wordsworth*). GOODLY adds to the idea of considerable size the implication (sometimes humorous) of comeliness or excellence; as, "Ancient sirloin . . . a joint of *goodly* presence" (*Irving*). See PLENTIFUL, RICH, GREAT.

3. *Music* A capriccio.

Syn. — Humor, fancy, whimsey, quirk. — CAPRICE, FREAK, WHIM, VAGARY, CROTCHET agree in the idea of a sudden or arbitrary fancy, desire, or change of mind. CAPRICE emphasizes the lack of apparent motivation, and implies a certain willfulness or wantonness; this implication is even stronger in the adj., *capricious;* as, "They made me, without my search, a species of popular idol; they, without reason or judgment, beyond the *caprice* of their good pleasure, threw down the image from its pedestal" (*Byron*); "Fancy . . . is as *capricious* as the accidents of things" (*Wordsworth*); "The fantastic and *capricious* behavior of the passions" (*Fielding*). FREAK denotes an impulsive, seemingly causeless, change of mind, like those of a child or a lunatic; as, "a light word flung in the air, a mere *freak* of perverse child's temper" (*Thackeray*); "Follow this way or that, as the *freak* takes you" (*Stevenson*); "a thousand Puckish *freaks*" (*J. R. Green*). A WHIM is a mental eccentricity; it suggests not so much a sudden as a quaint, fantastic, or humorous turn or inclination (cf. *whimsical, whimsey*); as, "A young lady of some birth and fortune . . . who had strange *whims* of fasting" (*G. Eliot*). VAGARY (see VAGRANT) suggests still more strongly the erratic, extravagant, or irresponsible character of the notion or fancy; as, "Straight they changed their minds, flew off, and into strange *vagaries* fell" (*Milton*); "A great force of critical opinion controlling a learned man's *vagaries*, and keeping him straight" (*M. Arnold*). A CROTCHET is a perversely heretical or whimsical opinion on some (frequently) unimportant or trivial point; as, "It is a note of the provincial spirit not to hold ideas of this kind a little more easily, to be devoured by them, to suffer them to become *crotchets*" (*M. Arnold*). See WAYWARD; cf. FASHION.

It is accomplished by suspending fruits of the wild caprifig containing the fig wasp (*Blastophaga grossorum*) on the branches of the cultivated tree. The insects emerge from the former and enter the edible figs, thus effecting cross pollination. The consequent ripening of the seeds prevents the fruit from dropping prematurely and improves its flavor. Some varieties of figs mature without caprification. Smyrna figs are raised in California through caprification by imported fig wasps. Caprification is practiced in Smyrna, Spain, and Portugal. See FIG, FIG WASP.

Meredith*); "Is it *captious* to say that, when Manoah's locks are called 'white as down,' whiteness is no characteristic of down?" (*Lander*). CAVILING implies a disposition to raise objections on frivolous grounds; as, "The coxcomb criticizes the dress of the clown, as the pedant *cavils* at the bad grammar of the illiterate" (*Hazlitt*); "envious sneers and petty *cavils*" (*id.*). CARPING (cf. CRITICAL) implies illnatured, querulous, often perverse picking of flaws; as, "When I spoke, my honest homely words were *carped* and censured for want of courtly style" (*Dryden*); "Pedants . . . will ever be *carping*, if a gentleman or man of honor puts a pen to paper" (*Tatler*). CENSORIOUS implies a more deliberate and settled spirit of faultfinding: as, "Another vice of age. . . is severity and *censoriousness*, that gives no allowance to the failings of early life, that expects artfulness from childhood and constancy from youth, that is peremptory in every command, and inexorable to every failure" (*Rambler*). TO CAPTIVATE is to enthrall or capture the fancy by some special excellence, with no particular implication of magic influences; as, "just the hero to *captivate* a romantic girl" (*Irving*); *captivating* frankness. CHARM has lost its original connotation of magic, and implies simply the attractive power of that which gives delight; as, "there was a *charm* in his voice, a *fascination* in his eye" (*H. C. Robinson*); a *charming* woman. FASCINATE still suggests the exercise as it were of an irresistible spell, sometimes with implication of an effort to resist, as, "In the mighty calms that brood . . . over tropic latitudes, she *fascinates* the eye with a Fata Morgana" (*De Quincey*); a *fascinating* subject. In ENCHANT (see etym.) and BEWITCH the original connotation is frequently latent; *enchanting* commonly suggesting such compelling qualities as hold and bind, *bewitching*, such engaging graces as draw and allure; as, *enchanting* music, a *bewitching* smile. A PARODY employs in the treatment of a ludicrous or ridiculous subject the exact style (esp. in its mannerisms) of some serious and (usually) well-known composition or writer ; in a TRAVESTY, on the other hand, the subject remains unchanged, but the style is made extravagant or absurd ; as, "Their idea was to write a number of *parodies* in the manner of the most popular poets of the day" (*P. Fitzgerald*) ; "To apply that manner and that rhythm to Homer's incidents, is not to imitate Homer, but to *travesty* him" (*M. Arnold*). It is rapidly extending its range. In America it is not generally considered fit for food. 2. One of the hereditary classes into which the society of India is divided. The caste system is fundamental in Hinduism, referring, for its origin at least, to the time of the Aryan invasions of India Orthodox Hinduism ascribes to the invaders four castes: the **Brahman**, or priestly; the **Kshatriya**, warrior or kingly, the **Vaisya**, mercantile and agricultural; the **Sudra**, artisan and laboring. The first three of these are known as the *twice-born castes* Their token is the sacred thread; they are considered as the original Aryan castes, and they have religious rites and privileges denied to the Sudras, mainly composed of the conquered natives. Gradually a vast number of castes have been formed; as, on the basis of the occupation of the persons forming them, by the conversion of foreign tribes to Hinduism, the whole tribe forming a distinct caste; by religious sectarianism; by intermarriage and crossbreeding; by migration, etc. All castes are theoretically classified according to the original scheme of four, and intermarriage and social intercourse, in so far as these exist, are subject to rigid restrictions. Many of the religious reforms of India have started as protests against caste restrictions, yet even among the Indian Mohammedans class distinctions similar to the caste system are maintained. The native name for "caste" signifies "color," and the system seems to have originated in the endeavor of the light-hued Aryans to preserve their racial purity
A *caste* may be defined as a collection of families or groups of families bearing a common name which usually denotes or is associated with a specific occupation; claiming common descent from a mythical ancestor, human or divine, professing to follow the same professional calling, and regarded by those who are competent to give an opinion as forming a single homogeneous community. *Census of India*, 1901.

2. Hence, designating or pertaining to the division of mankind comprising the chief races of Europe, North Africa, and southwestern Asia, named the **Caucasian race** by Blumenbach in 1775 on the supposition that the people of the Caucasus were typical of the race. The typical Caucasian is distinguished, according to Flower and Lydekker, by light skin (though in aberrant groups as dark as the Ethiopic); hair ranging from fair to black, soft, straight or wavy, and in transverse section oval; beard full; skull variable, though mostly mesocephalic; cheek bones retreating; nose narrow and prominent; jaws orthognathous; teeth small. Huxley, and others, divide the Caucasians into the **Xanthochroi**, or blond type, of whom the Teutons are an example and who inhabit chiefly northern Europe; and the **Melanochroi**, or brunet type — either with dark hair and eyes and light skin, as the Iberians, or with dark hair, eyes, and skin, as most of the Hamites — who dwell in southern Europe, North Africa, and southwest Asia. The Ainus of Japan, Dravidians and Todas of India, Veddahs of Ceylon, and the Indonesians and Polynesians, are by some considered as aberrant Caucasians, but the typical peoples of the race are comprised in the speakers of the Indo-European, Semitic, and Hamitic languages, together with such noninflectional European tongues as Basque, Circassian, Georgian, etc. *Caucasian* should be distinguished from *Aryan*.

caus'al (kôz'ăl), *a.* [L. *causalis*. See CAUSE.] Relating to a cause or causes; implying or containing a cause or causes; of the nature of a cause; expressing a cause; causative; as, a *causal* clause or conjunction.

Causal propositions are where two propositions are joined by *causal* words. *Watts.*

The *causality* of the divine mind. *Whewell.*

2. The relation of cause and effect; the operation of cause as a principle or fact of nature; the necessary connection of events by causation, esp. as a sequence in time.

The long and short as regards *causality* is, that the category of cause and effect cannot be found in any functions of thought belonging to formal logic, for this is independent of time; nor in modes of time, for these are independent of logic; nor, therefore, in any imaginary schematism of the two. But it certainly is found, and found first of all, whatever be its validity, in our own doing and suffering. *James Wa d.*

3. *Phren.* Faculty of tracing effects to their causes.

cau-sa'tion (kô-zā'shŭn), *n.* **1.** Act of causing; also, act or agency by which an effect is produced.

The kind of *causation* by which vision is produced. *Whewell.*

2. Relation of cause and effect; causality.

cau-sa'tion-al (-ăl), *a.* Pertaining to causes, causation, or the doctrine of causation.

caus'a-tive (kôz'ă-tĭv), *a.* [From CAUSE; cf. F. *causatif*, L. *causativus* pertaining to a lawsuit (*causa*).] **1.** Effective or operating as a cause or agent; causing.

caus'a-tive, *n.* *Gram.* A causative word or form.

cause (kôz), *n.* [F. *cause*, fr. L. *causa*. Cf. CAUSE, *v.*, KICKSHAW.] **1.** That which occasions or effects a result; the necessary antecedent of an effect; that which determines the condition or existence of a thing, esp. that which determines its change from one form to another. Aristotle discriminated in processes of change or becoming four causes: (1) the **formal cause**: the form or conception of that which is to be, as it exists ideally, either in the essential nature of things themselves or in the mind, — for example, the plan of a house in the mind of the builder; (2) the **material cause**: that which is to be wrought to this form, - as the brick, timber, etc., of which the house is to be constructed; (3) the **efficient,** or **moving, cause,** — as the actual labor expended in building; (4) the **final cause**: that which is the end or object of the process, — as the completed house. The Scholastics held that there is a hierarchy of causes, the supreme or **first cause** being the divine mind. Thomas Aquinas defined *cause* as the realization of a possibility through actual development. Spinoza distinguished the **immanent** from the **transeunt cause,** the former being efficiency included within its effect, the latter an efficiency of one thing to produce something else; he also distinguished from the **inadequate,** the **adequate cause,** or that which by itself can clearly be perceived to be sufficient for the effect. Geulincx developed a special theory of **occasional cause,** namely, that on the occasion of each physical change God intervenes to produce a corresponding change in the soul, and that when we will anything God produces a corresponding movement of the body. Hume denied the possibility of knowledge of causal efficiency; the idea of cause is the result of the uniform sequence of phenomena. Kant distinguished causality as one of the categories of experience and *cause* as a form of understanding; while Hegel emphasized the distinction between *cause* and ground (see GROUND). Both efficiency and teleology commonly enter into modern metaphysical analyses of cause.

What is not yet real cannot be the *cause* of what is or has been real. This appears to be the root of our whole conviction about *cause* and effect in time. *B. Bosanquet.*

The *cause*, then, philosophically speaking, is the sum total of the conditions positive and negative taken together; the whole of the contingencies of every description, which being realized, the consequent invariably follows *J. S. Mill.*

When we scientifically state *causes* we are really describing the successive stages of a routine of experience. Causation, says John Stuart Mill, is uniform antecedence, and this definition is perfectly in accord with the scientific concept. *Karl Pearson.*

2. A person or thing that is the occasion of an action or state; an agent that brings something about; ground of action; reason; motive; as, *cause* for rejoicing.

3. Specif.: *Civil Law.* The ground, reason, or underlying fact essential to a valid contract or agreement.

Apart from those cases for which particular formalities are required, every legally permitted agreement is, according to French law, legally binding This view has long prevailed. . It is qualified only by the rule that the agreement must have a *cause*, the precise meaning of which seems to be far from clear to the French commentators themselves. *T. E. Holland.*

4. *Law.* A ground of action; also, a suit or action in court; any legal process by which a party endeavors to obtain his claim, or what he regards as his right; case.

8. A disease; malady. *Obs.*

Syn. — CAUSE, REASON, MOTIVE. *Cause* and *reason* may be used with reference to all phenomena; *motive*, with reference to actions only. A CAUSE (see OCCASION) is that which produces an effect; it is that without which the result would not have been. A REASON (see REASON) is that which explains or justifies a result; or, frequently, that which accounts for the particular character of an action or occurrence. Thus, the *cause* of a railroad accident may have been the failure of the air brakes to work; the *reason* for the accident, carelessness in inspecting the apparatus involved; the immediate *cause* of the French Revolution was the virtual bankruptcy of the government; its *reasons* are to be sought mainly in the antecedent conditions in France. What is *cause* from one point of view, however, may be *reason* from another, and *vice versa;* thus, in the example above, the failure of the air brakes to respond may be regarded as explaining the accident, and hence as its *reason;* and the defect in the brakes themselves may be thought of as the *cause.* Similarly, the antecedent conditions in France may be considered as *cause* no less than *reason.* A MOTIVE (see MOTIVE) is that which incites or prompts to action; thus, among the *motives* of the French revolutionists was their desire for liberty and equality. See INTENTION, ORIGIN; cf. EFFECT.

In animal cells the cell wall, when present, is usually of soft nitrogenous material, the hard parts of animal tissues being material secreted by the cells, and not a part of them.

cell (sĕl), *v.t.* & *i.* ; CELLED (sĕld). To place or live in a cell. *Obs. & R.*

In the simplest animals and plants, as the Protozoa and Schizophyta, the body may consist of a single cell, but in the larger and higher forms it is an aggregation of cells and their products, the individual cells being differentiated (to perform particular functions) as *muscle cells, nerve cells*, etc., or in plants as *bast cells, sieve cells*, etc. Every cell originates by a process of division (see AMITOSIS and MITOSIS) from a previously existing living cell. (This view of the structure and development of organisms, now universally accepted, is called the **cell theory.**) Thus all the cells of an organism may be traced back to a single parent cell, the fertilized egg (see OVUM).

The protoplasm of the nucleus is called *nucleoplasm*, or *karyoplasm*, that of the remainder of the cell *cytoplasm*. The nucleus (see NUCLEUS) usually contains one or more nucleoli (see NUCLEOLUS), and granules of a deeply staining substance called *chromatin*, which are usually arranged in an irregular network. Under certain conditions, as in mitosis, the chromatin becomes aggregated into *chromosomes* (see CHROMOSOME). In addition to the nucleus the cytoplasm often contains plastids; passive bodies, as oil drops and yolk globules; centrosomes or other structures concerned in mitosis; and vacuoles or fluid cavities. There may be more than one nucleus (see CŒNOCYTE, SYNCYTIUM).

Plant cells usually develop a *cell wall* composed wholly of *cellulose* (see CELLULOSE), varying in thickness to suit the requirements of the various tissue systems. The cytoplasm contains also numerous *plastids*, which may be colored (*chromatophores*) or colorless (*leucoplasts*); frequently also starch grains, aleurone grains, oil drops, and crystals of calcium oxalate (*raphides*) or of calcium carbonate (*cystoliths*). In young cells the cavity is mainly filled by the cytoplasm, but, as they mature, this is pressed aside by the vacuoles, and ultimately forms only a thin layer (*primordial utricle*) lining the cell wall. The nucleus, cytoplasm, and plastids, when present, constitute the protoplast, which is the vital part of the cell.

Syn. — CENTER, MIDDLE, MIDST. CENTER always implies an object of relatively definite outline, and commonly approximates more or less closely its strict geometrical sense; as, the *center* of a circle, of a table, of a target, of a ball. MIDDLE is less precise than *center*, and suggests a space rather than a point; it is the part of an object which surrounds the *center*; thus, the *middle* of a room is the central portion of it; the *middle* of a table has room for more than a *center* piece. *Middle*, unlike *center*, also applies to that which has duration (as, the *middle* of the night), and to merely linear extension (as, the *middle* of the road). MIDST, in present usage, implies a number of surrounding or enveloping objects (see AMONG); as, in the *midst* of a forest, of a crowd. *Midst*, unlike *middle* and *center*, is frequently used in fig. senses; as, "In the *midst* of life we are in death" (*Bk. of Com. Prayer*).

cer'e-mo'ni-al (sĕr'ē-mō'nĭ-ăl), *a.* [L. *caerimonialis*: cf. F. *cérémonial.* See CEREMONY.] **1.** Relating to ceremony, or external rite; characterized by, consisting of, or of the nature of, ceremonies or ceremony, religious or social; ritual; according to the forms of established rites.

Ceremonial observances and outward show. *Hallam.*

2. Observant of forms; ceremonious. *Obs. or R.*, being now superseded by *ceremonious* in this sense.

Syn. — Ritual; precise, punctilious, studied, stiff, prim. — CEREMONIAL, CEREMONIOUS, FORMAL, CONVENTIONAL. In present usage *ceremonial* applies only to things; *ceremonious*, to either persons or things. That is CEREMONIAL which relates to or consists in outward forms or ceremonies; as, "the crisp, *ceremonial* laurel wreath of the Roman conqueror" (*W. Pater*); the *ceremonial* law. CEREMONIOUS applies to that which is characterized by ceremony (frequently elaborate or pompous), or to one who is addicted to a punctilious observance of formalities; as, "Let us take a *ceremonious* leave" (*Shak.*); "[He] repeated the responses very audibly, evincing that kind of *ceremonious* devotion punctually observed by a gentleman of the old school" (*Irving*). FORMAL, as synonymous with *ceremonial*, suggests set form or procedure rather than external rites; as, a *formal* call (cf. a *ceremonial* call), a *formal* occasion. As synonymous with *ceremonious*, *formal* suggests rigor, stiffness, restraint, rather than show or pomp; as, "the fatigue and slavery of maintaining a ceremonial, more stiff, *formal*, and oppressive than the etiquette of a German elector" (*Smollett*); "The habits of the family . . . may be termed *formal*, and old-fashioned by such visitors as claim to be the pink of the mode" (*Scott*). CONVENTIONAL (cf. *academic*, under SCHOLARLY) applies to that which is in accord with or governed by the recognized, frequently artificial, conventions or standards; it connotes lack of originality or independence; as, a *conventional* expression of regret, the *conventional* white tie, a hopelessly *conventional* person · "the discord . . . between *conventionality* and originality" (*C. Waldstein*). See CEREMONY, CIVIL, CORRECT, SCRUPULOUS.

Syn. — Observance, ritual, solemnity. — FORM, FORMALITY, CEREMONY, RITE. A FORM, as here compared, is an established method of procedure, or any recognized way of doing things in accordance with rule or prescription; as, the *forms* of polite society, in due *form*; "the occasional exercise of a beautiful *form* of worship" (*Irving*). *Form* often implies show without substance; as, "The rest . . . will deem in outward rites and specious *forms* religion satisfied" (*Milton*). FORMALITY implies, still more frequently, conventional or perfunctory attention to external details; as, his attendance was a mere *formality*, the dreary *formalities* of social life; "There was now and then the *formality* of saying a lesson" (*Lamb*). CEREMONY is more specific than *form*, and implies certain outward acts, usually of an impressive or dignified character, associated with some religious, public, or state occasion; as, the marriage *ceremony*, the *ceremonies* attending the coronation of a king. *Ceremony* also applies to the conventional usages of civility; as, "The appurtenance of welcome is . . . *ceremony*" (*Shak.*); to stand on *ceremony*. RITE suggests more definitely the solemn, religious, or secret character of the service or occasion; as, "Do we all holy *rites*; let there be sung 'Non nobis' and 'Te Deum'" (*Shak.*); "Doing abhorred *rites* to Hecate in their obscured haunts" (*Milton*). See OBSERVATION, CEREMONIAL.

Ce'res (sē'rēz), *n.* [L., Ceres, also corn, grain] **1.** *Rom. Relig.* Goddess of the growing vegetation. In her oldest worship she was closely associated with the earth goddess, *Tellus Mater*; her feast, the **Ce'ri-a'li-a** (sē'rĭ-ā'lĭ-*a*), was celebrated on April 19, honoring the young vegetation. In response to the Sibylline oracle, about 500 B. C., the Greek cult of Demeter, Dionysus, and Kore was introduced into Rome, Demeter being identified with Ceres, Dionysus and Kore with Liber and Libera. To this cult belonged the later worship of Ceres as a corn and earth goddess. In Roman myth Ceres is the daughter of Ops and Saturn. Cf. DEMETER.

In England, orig., the office or bureau of the king's chancellor; later, the court presided over by the Lord Chancellor, which was the highest court of judicature next to Parliament until under the Judicature Act of 1873 it became the Chancery Division of the High Court of Justice. At first the chancery was the bureau, office, or ministry of justice of the king's chancellor, who after the abolition of the chief justiciar was the king's highest officer. Orig the function of the office was administrative and consisted essentially in issuing the royal messages, mandates, or orders under the great seal; but from about the time of Edward I. the office began to assume the hearing and determining of causes, and by the 16th century was an established court of the realm, with two branches, one (often called its *ordinary*, or *Latin, side*) having a certain common-law jurisdiction and the other (the *equity side*) having an equity jurisdiction. From the beginning all original writs and the writs for a new parliament were issued out of chancery, later from the common-law branch, the judicial jurisdiction of which came to be chiefly concerned with cases of relief against the crown. The equity jurisdiction alone was transferred to the Chancery Division of the High Court by the Judicature Act. See EQUITY. The chancery of Ireland was distinct from that of England, but was likewise converted into a division of the Irish High Court of Justice.
3. In the United States, a court of equity. See EQUITY. change ringing. The continual production, without repetition, of changes on bells. A set of bells for change ringing, called a ring of bells, is tuned to the diatonic scale. When struck in descending order from treble or highest (designated "1") to tenor or lowest, the bells are said to be in the position of **rounds**. *Changes* are variations from this striking order according to certain rules, as that (1) no bell shifts more than one place in a change from its position in the change preceding; (2) no change is rung twice from the time the bells leave the position of rounds until they return. The course of any bell is its shifting path through a series of changes, though the term may also designate the series itself. In **plain hunting** all bells work regularly from first place, or **lead**, to last, or **behind** (called **hunting up**), and back again (called **hunting down**), striking as first or last in two successive changes. A single bell with such a course is said to have a **plain hunt**. The chief *methods* of change ringing are: (1) **grandsire**, in which the treble and one other bell (bell 2 in *Illust.*) have a plain hunt, and the bell leading next before treble lead (as 5 in *Illust.*) goes only to third place, where it strikes twice — "*makes* third place" — and then goes back, while the other bells dodge or step backwards in their course up or down (as at * in the *Illust.*). To produce the desired number of changes without returning to rounds, certain modifications of the course-ing order, called bob and single, are introduced at prearranged intervals. Warning of these changes in work (which can occur only when treble leads) is given by the conductor or head ringer, who *calls* the peals. The accompanying *Illust.* of bob and single in a grandsire course for five bells shows that bells 4 and 5 (at †) do not rise above third place, while 2 and 3 "double dodge." (2) **plain bob**, in which the treble alone has a plain hunt. (3) **treble bob**, in which the treble has a uniform but zigzag course, and all the bells dodge. (4) **Stedman** (invented about 1670 by Fabian Stedman), in which bells 1, 2, and 3 go through their six possible changes (see below), while the other bells dodge. At the end of six changes takes its place bells goes up and dodges, while one of the others takes its place through six changes again; and so on. Changeringing is further distinguished by the number of bells on which it is performed. The number of possible changes on any given set of bells may

Cheese is made from whole milk, skimmed milk, skimmed milk with the addition of cream or even of lard or oleomargarine, and to a small extent from cream alone. Cow's milk is of course used chiefly, but the milk of the goat and the ewe is also employed. The curd is separated from the milk by the use of some coagulating agent, usually rennet, and contains besides casein varying amounts of fat, etc. See CURD. There are many varieties of cheese, depending on the composition of the curd and the mode of handling it. To make soft cheese such as Brie and Camembert the curd is merely placed in molds, for hard cheeses, as Cheddar and Edam, it is subjected to pressure. The characteristic texture and flavor of a cheese are developed during the ripening, a fermentative process requiring a few days to several months according to the nature of the cheese. The agents in this process may be enzymes already in the curd, peptonizing bacteria, or, in cheeses like Roquefort, mold fungi allowed to develop in apertures made in the curd.

chem'is-try (kĕm'ĭs-tĭ), *n.* [From CHEMIST. See ALCHEMY.] **1.** The science that treats of the composition of substances, and of the transformations which they undergo, — originally synonymous with *alchemy* From the **alchemical period** chemistry passed to that of **iatrochemistry**, in which it was joined to medicine, and not until the time of Robert Boyle (1626-91) did it become an independent science. The period from Boyle to Antoine Lavoisier (1743-94) is called the **phlogistic period**, it was followed by the **antiphlogistic period**, or modern chemical period, which since 1802-03 might be called the period of the atomic theory. See ALCHEMY, IATROCHEMISTRY, PHLOGISTON, ATOMIC THEORY. The field of chemistry has long been divided into **organic chemistry** and **inorganic chemistry**, from the belief, once current, that compounds are produced in living organisms by some vital force and are essentially different from those made in the laboratory and in inorganic nature. But many products of life processes and a much larger number of new carbon compounds related to them have since been prepared artificially, and the distinction is now one of convenience merely. *Organic chemistry*, then, is the chemistry of the hydrocarbons and their derivatives, whether found in organisms or not, while *inorganic chemistry* treats of all other compounds and of the elements. Such compounds as the oxides of carbon, the carbides, and the cyanides are assigned, sometimes to the one, sometimes to the other. The enormous number and the completeness of related series of organic compounds, together with their remarkable facility of exchange and substitution, offer an illustration of chemical reaction and homology not to be paralleled in inorganic chemistry, and justify what would otherwise be a one-sided division. **Physical chemistry**, in which the most remarkable recent chemical advances have been made, studies quantitatively the relations between chemical and physical properties and phenomena ; it includes **thermochemistry, electrochemistry, photochemistry**, etc. **Physiological chemistry** deals with the chemical processes which take place in plants and animals, but esp. the latter. The chemistry of plants is sometimes called **phytochemistry**, that of animals, **zoochemistry**. Correlated to these in the inorganic field are **mineralogical** and **geological chemistry. Applied chemistry**, as distinguished from **pure chemistry**, has various branches, as **agricultural, pharmaceutical, sanitary**, and **technical** (or **industrial**), **chemistry**. Here belongs also **analytical chemistry** in the ordinary sense. See ANALYSIS. See also ELEMENT, ATOM, PERIODIC LAW, etc.

2. An application of chemical theory and method to the consideration of some particular subject ; as, the *chemistry* of iron ; the *chemistry* of indigo.

In later lore, one of an order of angels, ordinarily symbolizing divine wisdom or justice, and variously placed in the heavenly hierarchies, usually below the seraphim (see ANGEL, 1); also, a conventional representation of such an angel in painting and sculpture. In early Christian art the cherubim are characteristically shown as blue, to denote knowledge (cf. SERAPH). In later art cherubs are usually represented as beautiful children, generally winged, or as consisting of children's heads with wings.

4. Transferred: **a** A beautiful or beloved woman. *Shak.* **b** A beautiful child.

Syn. — CHERUB, SERAPH; CHERUBIM, CHERUBS. The conventional distinction between *cherub* and *seraph* appears from the quotations below. In present usage the foreign pl. *cherubim* is used where the reference is specifically to the members of the celestial hierarchy; the native pl. *cherubs* applies to their conventional representation in art (usually as winged children, or children's heads), or, by semihumorous transfer, to children themselves.

We find, as far as credit is to be given to the celestial hierarchy of that supposed Dionysius the senator of Athens, the first place or degree is given to the angels of love, which are termed *seraphim;* the second to the angels of light, which are termed *cherubim.* [CL. ANGEL.] *Bacon.*

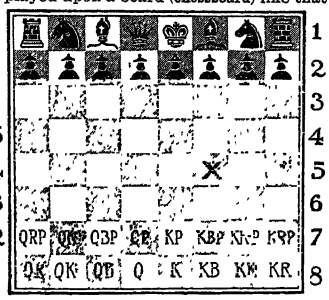
chess (chĕs), *n.* [ME. *ches*, OF. *eschès* (acc. pl. of *eschec*), F. *échecs*, prop. pl. of *échec* check. See 1st CHECK.] **1.** A game of pure skill played on a chessboard with chessmen, the players moving alternately until the king of one is so attacked that he cannot escape. Chess is a game of ancient and obscure origin It was probably imported into Europe in medieval times from the Orient. In its European form it is played upon a board (**chessboard**) like that of draughts, or checkers. In English NOTATION the *ranks* are numbered first to eighth by each player from his own side of the board, and the *files* are named from the piece standing on the first square at the beginning of the game: the king's file, the queen's file, king's knight's file, queen's rook's file, etc. Thus the square marked (x) is white's king's bishop's fourth (KB4) ; but is black's king's bishop's fifth (KB5). In German notation the ranks are numbered always from white's side, and the files are named *a b c d e f g h* from white's left to right.



Chessboard, showing for Black the conventional symbols for the Men, and for White the corresponding abbreviations.

The MEN used in playing ordinary chess (**chessmen** ; *sing.* **chessman**) are two corresponding but differently colored sets of eight *pieces* and eight *pawns* each, usually called the *white* and the *black* respectively. At the beginning of the game the eight PIECES are placed as follows: The two rooks or castles are placed at the corners of the chessboard next to the player (the one at the right on a square of light color). Next to these, on the first rank, are placed two knights ; next to these, two bishops : the center being occupied by the king (K) and queen (Q) with the queen on her color. A bishop (B), knight (Kt), or rook (R) is designated as "king's" or "queen's" according as it is nearer the king or the queen (*abbr.* KKt , "king's knight ;" QKt., "queen's knight," etc.). The eight PAWNS (P) occupy the second rank, and are designated by the name of the piece behind them; as, "king's knight's pawn" (KKtP).

For the moves of chessmen see BISHOP, KING, KNIGHT, PAWN, QUEEN, ROOK. Chess MOVES are indicated in **chess notation**, as follows: - moves to ; × takes ; † check ; ‡ takes and checks. See also CASTLE. Games of chess are usually begun by a conventional series of moves called a **chess opening**, other than the conventional openings being called "irregular." Except in certain games at odds, white has the first move. Notable chess openings are :

Chi-nese' (chī-nēz'; -nēs'; 277), *n. sing. & pl.* **1.** A native of China; specif., a member of the most numerous branch of the Mongolian race and the most ancient and highly civilized people of the Chinese empire. The Chinese are characterized by aptitude for commerce and agriculture, peaceableness, punctilious formalism, and intense conservatism. Their physical type is remarkably homogeneous and conforms in general to the Mongolian standard (see MONGOLIAN), although in southern China modified by intermixture, probably with aboriginal Indonesians. The cranium is higher and proportionally longer than in other yellow races, sometimes approaching dolichocephaly.
2. The language of the Chinese. See INDO-CHINESE LANGUAGES. The present spoken and written vocabulary of Chinese, including that of the nine canonical books, comprises about 7,500 characters representing monosyllabic words, which, however, form compounds freely like the English *foresight, browbeat.* As regards their written forms they fall into three classes: (1) the survivals of picture writing, such as those for *sun, tree;* (2) those made by combining two others to symbolize a third related idea; thus that for *bright* (*ming*²) as made of the joined characters for *sun* and *moon;* (3) those — the great majority — which are formed of a radical and a phonetic. See PHONETIC, *n.* As written these words have the same meaning throughout China. Their spoken sounds, however, vary with the dialects, of which there are at least eight so different as to be mutually unintelligible, those of Canton, Swatow, Amoy, Fuchau, Wenchau, and Ningpo, for the most part confined to the southern and central coast regions; and the Hakka and Mandarin (which see). The number of syllabic sounds in Chinese is remarkably few, Pekinese having only about 420. The homophones are further distinguished, however, by the so-called "tones" (see TONE, *n.*), and by the practice of coupling monosyllables, the second of each pair being a synonym, adjective, or suffix. As regards syntax Chinese is an *isolating language* (which see). The higher literary idiom is distinctively known as *Wĕn-li.*

Chinese was itself formerly polysyllabic, and may consequently have sprung from a common Tibeto-Mongol form of speech, of which Akkad is the earliest and nearest representative
